

Crowd Sourcing Application

This application(website) aims to deploy a crowd sourcing application open to public.

Users of the application:

Work providers – Companies or individuals who will publish small IT projects to be delivered within a specified timeline and within a range of budget

Workers - People who can submit their bid for the published work and a brief description of their approach and timeline

Admin – mediator for managing the payment process and managing any conflict between parties

Similar websites exist in the market such as topcoder, freelancer etc.
